MINI PROJECT

Build a Page About Something You Love

Your first real website — one page, your topic, your rules.

Time to use everything you've learned — HTML structure, CSS styling, and a little JavaScript — to build a real web page from scratch. Pick a topic you actually care about, then bring it to life.

1 Pick Your Topic

Choose ONE thing to make your page about. Some ideas to get you started — or come up with your own:

- 🍕 Your favourite food
- 🎮 Your favourite game
- ⚽ Your favourite sport
- 🐾 Your pet (real or dream pet)
- 🎬 A film or show you love
- ✈️ Somewhere you want to visit
- 🎸 A hobby

2 What Your Page Must Have

- ☐ **A page title**
  Set with the `<title>` tag — shows up in the browser tab.
- ☐ **A big heading**
  One `<h1>` naming your topic, e.g. "All About Pizza".
- ☐ **At least one paragraph**
  Real writing about your topic — not just one sentence.
- ☐ **At least one image**
  An `<img>` that's actually related to your topic.
- ☐ **A background**
  A background colour OR a background image for the page.
- ☐ **A "Click Me" button**
  Clicking it changes your heading's colour — needs a little JavaScript.
- ☐ **Styled with CSS**
  Use at least 3 different CSS properties — font, spacing, borders, anything.
- ☐ **Tidy & readable**
  Sensible indentation, no giant walls of unstyled text.

3 Need a Nudge?

THE "CLICK ME" BUTTON — THE ONLY JS BIT

```
<h1 id="heading">All About Pizza</h1>
<button onclick="changeColor()">Click Me!</button>

<script>
  function changeColor() {
    document.getElementById("heading").style.color
= "orange";
```

★ Stretch Goals

Finished early? Try one of these:

- A second button that changes the **background** colour too
- Make the heading change to a **different** colour each click
- A hover effect on your button (`:hover` in CSS)

```
  }
</script>
```

- More than one image, arranged neatly

4 How You'll Be Marked

CRITERIA	WHAT WE'RE LOOKING FOR	POINTS
HTML structure	Title, heading, paragraph, image all present and correct	4
CSS styling	Background set, at least 3 CSS properties used sensibly	4
Working button	Click Me button actually changes the heading's colour	4
Content & topic	Real content about a real topic — effort shows	3
Tidiness	Code is readable, nothing broken or missing	2
Total		17

Submitting your work

Save your file as `index.html`. Name it `YourName_Project1` and hand it in the way your teacher tells you — Mission IDE upload, email, or USB.
